Children of the Dead End Patrick MacGill 1914

The Daughter of Anderson Crow George Barr McCutcheon 2020-09-28 He was imposing, even in his pensiveness. There was no denying the fact that he was an important personage in Tinkletown, and to the residents of Tinkletown that meant a great deal, for was not their village a perpetual monument to the American Revolution? Even the most generalising of historians were compelled to devote at least a paragraph to the battle of Tinkletown, while some of the more enlightened gave a whole page and a picture of the conflict that brought glory to the sleepy inhabitants whose ancestors were enterprising enough to annihilate a whole company of British redcoats, once on a time. Notwithstanding all this, a particularly disagreeable visitor from the city once remarked, in the presence of half a dozen descendants (after waiting twenty minutes at the post-office for a dime's worth of stamps), that Tinkletown was indeed a monument, but he could not understand why the dead had been left unburied. There was excellent cause for resentment, but the young man and his stamps were far away before the full force of the slander penetrated the brains of the listeners. Anderson Crow was as imposing and as rugged as the tallest shaft of marble in the little cemetery on the edge of the town. No one questioned his power and authority, no one misjudged his altitude, and no one overlooked his dignity. For twenty-eight years he had served Tinkletown and himself in the triple capacity of town marshal, fire chief and street commissioner. He had a system of government peculiarly his own; and no one possessed the heart or temerity to upset it, no matter what may have been the political inducements. It would have been like trying to improve the laws of nature to put a new man in his place. He had become a fixture that only dissolution could remove. Be it said, however, that dissolution did not have its common and accepted meaning when applied to Anderson Crow. For instance, in discoursing upon the obnoxious habits of the town's most dissolute rake—Alf Reesling—Anderson had more than once ventured the opinion that "he was carrying his dissolution entirely too far." And had not Anderson Crow risen to more than local distinction? Had not his fame gone abroad throughout the land? Not only was he the Marshal of Tinkletown at a salary of \$200 a year, but he was president of the County Horse-thief Detectives' Association and also a life-long delegate to the State Convention of the Sons of the Revolution. Along that line, let it be added, every parent in Tinkletown bemoaned the birth of a daughter, because that simple circumstance of origin robbed the society's roster of a new name.

Cyber Defence in the Age of AI, Smart Societies and Augmented Humanity Hamid Jahankhani 2020-04-06 This publication highlights the fast-moving technological advancement and infiltration of Artificial Intelligence into society. Concepts of evolution of society through interconnectivity are explored, together with how the fusion of human and technological interaction leading to Augmented Humanity is fast becoming more than just an endemic phase, but a cultural phase shift to digital societies. It aims to balance both the positive progressive outlooks such developments bring with potential issues that may stem from innovation of this kind, such as the invasive procedures of bio hacking or ethical connotations concerning the usage of digital twins. This publication will also give the reader a good level of understanding on fundamental cyber defence principles, interactions with Critical National Infrastructure (CNI) and the Command, Control, Communications and Intelligence (C3I) decision-making framework. A detailed view of the cyber-attack landscape will be garnered; touching on the tactics, techniques and procedures used, red and blue teaming initiatives, cyber resilience and the protection of larger scale systems. The integration of AI, smart societies, the human-centric approach and Augmented Humanity is discernible in the exponential growth, collection and use of [big] data; concepts woven throughout the diversity of topics covered in this publication; which also discusses the privacy and transparency of data ownership, and the potential dangers of exploitation through social media. As humans are become ever more interconnected, with the prolificacy of smart wearable devices and wearable body area networks, the availability of and abundance of user data and metadata derived from individuals has grown exponentially. The notion of data ownership, privacy and situational awareness are now at the forefront in this new age.

The History and Future of Technology Robert U. Ayres 2021 Eminent physicist and economist, Robert Ayres, examines the history of technology as a change agent in society, focusing on societal roots rather than technology as an autonomous, self-perpetuating phenomenon. With rare exceptions, technology is developed in response to societal needs that have evolutionary roots and causes. In our genus Homo, language evolved in response to a need for our ancestors to communicate, both in the moment, and to posterity. A band of hunters had no chance in competition with predators that were larger and faster without this type of organization, which eventually gave birth to writing and music. The steam engine did not leap fully formed from the brain of James Watt. It evolved from a need to pump water out of coal mines, driven by a need to burn coal instead of firewood, in turn due to deforestation. Later, the steam engine made machines and mechanization possible. Even quite simple machines increased human productivity by a factor of hundreds, if not thousands. That was the Industrial Revolution. If we count electricity and the automobile as a second industrial revolution, and the digital computer as the beginning of a third, the world is now on the cusp of a fourth revolution led by microbiology. These industrial revolutions have benefited many in the short term, but devastated the Earth's ecosystems. Can technology save the human race from the catastrophic consequences of its past success? That is the question this book will try to answer.

West Deptford April Maska 2011 West Deptford Township was officially incorporated on March 1, 1871, when it was separated from the much larger Deptford Township. Pioneers, drawn by fertile land and proximity to waterways and major cities, discovered that this small acreage of land was perfect for farming. These family farms grew into small family-owned businesses, attracting others wishing to begin homesteads and other companies. As time went on, clusters of family farms were transformed into small communities. Neighborhoods such as Verga, Colonial Manor, Thorofare, and Greenfields emerged. Today, West Deptford, a prideful community, is a blend of the old and new. Old family farmhouses stand proudly next to new developments. West Deptford features images and stories from many township residents.
