Applications of Learning Classifier Systems Larry Bull 2012-08-13 The field called Learning Classifier Systems is populated with romantics. Why shouldn't it be possible for computer programs to adapt, learn, and develop while interacting with their environments? In particular, why not systems that, like organic populations, contain competing, perhaps cooperating, entities evolving together? John Holland was one of the earliest scientists with this vision, at a time when so-called artificial intelligence was in its infancy and mainly concerned with preprogrammed systems that didn't learn. that, like organisms, had sensors, took Instead, Holland envisaged systems actions, and had rich self-generated internal structure and processing. In so doing he foresaw and his work prefigured such present day domains as reinforcement learning and embedded agents that are now displacing the older "standard Af". One focus was what Holland called "classifier systems": sets of competing rule like "classifiers", each a hypothesis as to how best to react to some aspect of the environment--or to another rule. The system embracing such a rule "popu lation" would explore its available actions and responses, rewarding and rating the active rules accordingly. Then "good" classifiers would be selected and re produced, mutated and even crossed, a la Darwin and genetics, steadily and reliably increasing the system's ability to cope.

Film and the Classical Epic Tradition Joanna Paul 2013-02-28 Paul explores the relationship between films set in the ancient world and the classical epic tradition, arguing that there is a connection between the genres. Through this careful consideration of how epic manifests itself through different periods and cultures, we learn how cinema makes a claim to be a modern vehicle for a very ancient tradition.

The Madness of Epic Debra Hershkowitz 1998-06-25 Madness plays a vital role in many ancient epics: not only do characters go mad, but madness also often occupies a central thematic position in the texts. In this book, Debra Hershkowitz examines from a variety of theoretical angles the representation and poetic function of madness in Greek and Latin epic from Homer through the Flavians, including individual chapters devoted to the Iliad and Odyssey, Virgil's Aeneid, Ovid's Metamorphoses, Lucan's Bellum Civile, and Statius' Thebaid. The study also addresses the difficulty of defining madness, and discusses how each epic explores this problem in a different way, finding its own unique way of conceptualizing madness. Epic madness interacts with ancient models of madness, but also, even more importantly, with previous representations of madness in the literary tradition. Likewise, the reader's response to epic madness is influenced by both ancient and modern views of madness, as well as by an awareness of intertextuality.

Allegorical Poetics and the Epic Mindele Anne Treip 2014-07-15 Literary allegory has deep roots in early reading and interpretation of Scripture and classical epic and myth. In this substantial study, Mindele Treip presents an overview of the history and theory of allegorical exegesis upon Scripture, poetry, and especially the epic from antiquity to the seventeenth and early eighteenth centuries, with close focus on the Renaissance and on the triangular literary relationship of Tasso, Spenser, and Milton. Exploring the different ways in which the term allegory has been understood, Treip finds significant continuities-within-differences in a wide range of critical writings, including texts of postclassical, patristic and rabbinical writers, medieval writers, notably Dante, Renaissance theorists such as Coluccio Salutati, Bacon, Sidney, John Harrington and rhetoricians and mythographers, and the neoclassical critics of Italy, England and France, including Le Bossu. In particular, she traces the evolving theories on allegory and the epic of Torquato Tasso through a wide spectrum of his major discourses, shorter tracts and letters, giving full translations. Treip argues that Milton wrote, as in part did Spenser, within the definitive framework of the mixed historical-allegorical epic erected by Tasso, and she shows Spenser's and Milton's epics as significantly shaped by Tasso's formulations, as well as by his allegorical structures and images in the *Gerusalemme liberata*. In the last part of her study Treip addresses the complex problematics of reading *Paradise Lost* as both a consciously Reformation poem and one written within the older epic allegorical tradition, and she also illustrates Milton's innovative use of biblical "Accommodation" theory so as to create a variety of radical allegorical metaphors in his poem. This study brings together a wide range of critical issues -- the Homeric-Virgilian tradition of allegorical reading of epic; early Renaissance theory of all poetry as "translation" or allegorical metaphor; midrashic linguistic techniques in the representation of the Word; Milton's God; neoclassical strictures on Milton's allegory and allegory in general -- all of these are brought together in new and comprehensive perspective.

Homer and Early Greek Epic Margalit Finkelberg 2019-12-02 This collection includes thirty scholarly essays on Homer and Greek epic poetry published by Margalit Finkelberg over the past three decades. The topics discussed reflect the author's research interests and represent the main directions of her contribution to Homeric studies: Homer's language and diction, archaic Greek epic tradition, Homer's world and values, transmission and reception of the Homeric poems. The book gives special emphasis to some of the central issues in

contemporary Homeric scholarship, such as oral-formulaic theory and the role of the individual poet; Neoanalysis and the character of the relationship between Homer and the tradition about the Trojan War; the multi-layered texture of the Homeric poems; the Homeric Question; the canon status of the Iliad and the Odyssey in antiquity and modernity. All the articles are revised and updated. The book addresses both scholars and advanced students of Classics, as well as non-specialists interested in the Homeric poems and their journey through centuries. Women, Epic, and Transition in British Romanticism Elisa Beshero-Bondar 2011 Women, Epic, and Transition in British Romanticism argues that early nineteenth-century women poets contributed some of the most daring work in modernizing the epic genre. The book examines several long poems to provide perspective on women poets working with and against men in related efforts, contributing together to a Romantic movement of large-scale genre revision. Women poets challenged longstanding categorical approaches to gender and nation in the epic tradition, and they raised politically charged questions about women's importance in moments of historical crisis. While Romantic epics did not all engage in radical questioning or undermining of authority, this study calls attention to some of the more provocative poems in their approach to gender, culture, and history. This study prioritizes long poems written by and about women during the Romantic era, and does so in context with influential epics by male contemporaries. The book takes its cue from a dramatic increase in the publication of epics in the early nineteenth-century. At their most innovative, Romantic epics provoked questions about the construction of ideological meaning and historical memory, and they centralized women's experiences in entirely new ways to reflect on defeat, loss, and inevitable transition. For the first time the epic became an attractive genre for ambitious women poets. The book offers a timely response to recent groundbreaking scholarship on nineteenth-century epic by Herbert Tucker and Simon Dentith, and should be of interest to Romanticists and scholars of 18th- and 19th-century literature and history, gender and genre, and women's studies.

EPICS Application Source 1995 This manual describes a set of Application Source/Release Control tools (appSR) that can be used to develop software for EPICS based control systems. The Application Source/Release Control System (appSR) has been unbundled from base EPICS and is now available as an EPICS extension. Due to this unbundling, two new directories must be added to a user's path (see section "Environment" on page 3 for more information) and a new command getapp must be issued after the getrel command to get a specific version of appSR (see section "Creating The Initial Application System Area" on page 7 for more information). It is now required that GNU make version 3.71 or later be used for makes

instead of SUN make. Users should now type gmake instead of make.

Grid Computing Fran Berman 2003-04-18 Grid computing is applying the resources of many computers in a network to a single problem at the same time Grid computing appears to be a promising trend for three reasons: (1) Its ability to make more cost-effective use of a given amount of computer resources, (2) As a way to solve problems that can't be approached without an enormous amount of computing power (3) Because it suggests that the resources of many computers can be cooperatively and perhaps synergistically harnessed and managed as a collaboration toward a common objective. A number of corporations, professional groups, university consortiums, and other groups have developed or are developing frameworks and software for managing grid computing projects. The European Community (EU) is sponsoring a project for a grid for high-energy physics, earth observation, and biology applications. In the United States, the National Technology Grid is prototyping a computational grid for infrastructure and an access grid for people. Sun Microsystems offers Grid Engine software. Described as a distributed resource management tool, Grid Engine allows engineers at companies like Sony and Synopsis to pool the computer cycles on up to 80 workstations at a time. * "the Grid" is a very hot topic generating broad interest from research and industry (e.g. IBM, Platform, Avaki, Entropia, Sun, HP) * Grid architecture enables very popular e-Science projects like the Genome project which demand global interaction and networking * In recent surveys over 50% of Chief Information Officers are expected to use Grid technology this year Grid Computing: * Features contributions from the major players in the field * Covers all aspects of grid technology from motivation to applications * Provides an extensive state-of-the-art guide in grid computing This is essential reading for researchers in Computing and Engineering,

physicists, statisticians, engineers and mathematicians and IT policy makers.

'Computing in High Energy Physics '95' Ronald Shellard 1996-10-24 CHEP (Computing in High Energy Physics) is the largest international meeting of the communities of High Energy Physics, Computing Science and the Computing Industry. The sixth conference in this series was held in Rio de Janeiro, Brazil in September 1995. The focus of the conference was "Computing for the next Millennium". High Energy Physics is at a point where major changes in the way data acquisition and computing problems are addressed will be called for in the high energy physics programs of the year 2000 and beyond. The conference covered a wide spectrum of topics including Data Access, Storage, and Analysis; Data Acquisition and Triggering; Worldwide Collaboration and Networking; Tools, Languages, and Software Development Environments; and special purpose processing systems. The papers presented both recent progress and radical approaches to computing problems as candidates for the basis of future computing in the field of high energy physics. Readership: Physicists and engineers.

Design and Rhetoric in a Sanskrit Court Epic Indira Viswanathan Peterson 2012-02-01

Explores the earliest literary treatment of Arjuna's combat with the great god Siva, providing an introduction to the Sanskrit court epic. "Peterson proves that it is possible and fruitful to approach mahakavya such as 'Arjuna and the Hunter' through the aesthetic values it embodies. She succeeds in making one of the greatest works of literature accessible and meaningful to non-specialists, as well as useful for teachers of South Asian culture and religion." — History of Religions

Orality, Textuality, and the Homeric Epics Jonathan L. Ready 2019-07-30 Written texts of the Iliad and the Odyssey achieved an unprecedented degree of standardization after 150 BCE, but what about Homeric texts prior to the emergence of standardized written texts? Orality, Textuality, and the Homeric Epics sheds light on that earlier history by drawing on scholarship from outside the discipline of classical studies to query from three different angles what it means to speak of Homeric poetry together with the word "text". Part I utilizes work in linguistic anthropology on oral texts and oral intertextuality to illuminate both the verbal and oratorical landscapes our Homeric poets fashion in their epics and what the poets were striving to do when they performed. Looking to folkloristics, part II examines modern instances of the textualization of an oral traditional work in order to reconstruct the creation of written versions of the Homeric poems through a process that began with a poet dictating to a scribe. Combining research into scribal activity in other cultures, especially in the fields of religious studies and medieval studies, with research into performance in the field of linguistic anthropology, part III investigates some of the earliest extant texts of the Homeric epics, the so-called wild papyri. By looking at oral texts, dictated texts, and wild texts, this volume traces the intricate history of Homeric texts from the Archaic to the Hellenistic period, long before the emergence of standardized written texts, in a comparative and interdisciplinary study that will benefit researchers in a number of disciplines across the humanities.

Structures of Epic Poetry Christiane Reitz 2019-12-16 This compendium (4 vols.) studies the continuity, flexibility, and variation of structural elements in epic narratives. It provides an overview of the structural patterns of epic poetry by means of a standardized, stringent terminology. Both diachronic developments and changes within individual epics are scrutinized in order to provide a comprehensive structural approach and a key to intra- and intertextual characteristics of ancient epic poetry.

EPICS 2002 This document describes the core software that resides in an Input/Output Controller (IOC), one of the major components of EPICS. EPICS consists of a set of software components and tools that Application Developers use to create a control system. The basic components are: OPI--Operator Interface. This is a UNIX based workstation which can run various EPICS tools; IOC--Input/Output Controller. This is a VME/VXI based chassis containing a processor, various I/O modules and VME modules that provide access to other I/O buses such as GPIB; and LAN--Local Area Network. This is the communication network which allows the IOCs and OPIs to communicate. EPICS provides a software component, Channel Access, which provides network transparent communication between a Channel Access client and an arbitrary number of Channel Access servers. This report is intended for anyone developing EPICS IOC databases and/or new record/device/driver support.
