

# Induced Innovation Theory And International Agricultural

Getting the books Induced Innovation Theory And International Agricultural now is not type of inspiring means. You could not isolated going next book addition or library or borrowing from your friends to gain access to them. This is an unquestionably simple means to specifically acquire lead by on-line. This online proclamation Induced Innovation Theory And International Agricultural can be one of the options to accompany you subsequently having new time.

It will not waste your time. understand me, the e-book will utterly freshen you additional business to read. Just invest tiny era to open this on-line declaration Induced Innovation Theory And International Agricultural as competently as review them wherever you are now.

Handbook of Agricultural Economics 2021-12-15 Handbook of Agricultural Economics, Volume Five highlights new advances in the field, with this new release exploring comprehensive chapters written by an international board of authors who discuss topics such as The Economics of Agricultural Innovation, Climate, food and agriculture, Agricultural Labor Markets: Immigration Policy, Minimum Wages, Etc., Risk Management in Agricultural Production, Animal Health and Livestock Disease, Behavioral and Experimental Economics to Inform Agri-Environmental Programs and Policies, Big Data, Machine Learning Methods for Agricultural and Applied Economists, Agricultural data collection to minimize measurement error and maximize coverage, Gender, agriculture and nutrition, Social Networks Analysis In Agricultural Economics, and more. Presents the latest release in the Handbook of Agricultural Economics Written and contributed by leaders in the field Covers topics such as The Economics of Agricultural Innovation, Climate, Food and Agriculture, Agricultural Labor Markets, and more

Scaling Up Disruptive Agricultural Technologies in Africa Jeehye Kim 2020-07-16 This study—which includes a pilot intervention in Kenya—aims to further the state of knowledge about the emerging trend of disruptive agricultural technologies (DATs) in Africa, with a focus on supply-side dynamics. The first part of the study is a stocktaking analysis to assess the number, scope, trend, and characteristics of scalable disruptive technology innovators in agriculture in Africa. From a database of 434 existing DAT operations, the analysis identified 194 as scalable. The second part of the study is a comparative case study of Africa's two most successful DAT ecosystems in Kenya and Nigeria, which together account for half of Sub-Saharan Africa's active DATs. The objective of these two case studies is to understand the successes, challenges, and opportunities faced by each country in fostering a conducive innovation ecosystem for scaling up DATs. The case study analysis focuses on six dimensions of the innovation ecosystem in Kenya and Nigeria: finance, regulatory environment, culture, density, human capital, and infrastructure. The third part of the study is based on the

interactions and learnings from a pilot event to boost the innovation ecosystem in Kenya. The Disruptive Agricultural Technology Innovation Knowledge and Challenge Conference in Nairobi, Kenya, brought together more than 300 key stakeholders from large technology companies, agribusiness companies, and public agencies; government representatives and experts from research and academic institutions; and representatives from financial institutions, foundations, donors, and venture capitalists. *Scaling Up Disruptive Agricultural Technologies in Africa* concludes by establishing that DATs are demonstrating early indications of a positive impact in addressing food system constraints. It offers potential entry points and policy recommendations to facilitate the broader adoption of DATs and improve the overall food system.

Publicly Funded Agricultural Research and the Changing Structure of U.S. Agriculture National Research Council 2002-03-18 The U.S. Department of Agriculture (USDA) requested that the Board on Agriculture and Natural Resources of the National Research Council (NRC) convene a panel of experts to examine whether publicly funded agricultural research has influenced the structure of U.S. agriculture and, if so, how. The Committee to Review the Role of Publicly Funded Agricultural Research on the Structure of U.S. Agriculture was asked to assess the role of public-sector agricultural research on changes in the size and numbers of farms, with particular emphasis on the evolution of very-large-scale operations.

Development Economics Yujiro Hayami 2005 Presbyterian minister John Witherspoon was a key figure, politically and religiously, in the formative years of the United States. In this fresh account of Witherspoon's thought, L. Gordon Tait focuses on Witherspoon's piety--the way Witherspoon believed that the Christian faith should take visible and practical form in ministry, politics, and everyday obedience and devotion. *The Piety of John Witherspoon* is filled with photographs from Witherspoon's life, and Tait's comprehensive treatment of Witherspoon makes a significant contribution to the understanding of his impact on church, education, and society.

Stream, River, Delta Carlisle Ford Runge 1999

Technological Innovation in Agriculture Alain De Janvry 1985 This paper examines the role of market and nonmarket forces in affecting the rate and bias of technical change in agriculture. It examines the process of generation of innovations and investment in agricultural research and explores, in the context of political economy, the sources of deviation from the equilibrium rate and bias of technical change. It is argued that a theory of the rate and bias of technological innovation must go beyond the analysis of market forces because they explain only a fraction of changes in investment and productivity in agriculture. It is further argued that the roles played by the various actors involved in agricultural research are being redefined as research moves in to the "Post Green Revolution" era. New mechanisms of identification of research priorities, of coordination of research programs, and of participation of social groups affected by research need to be devised to increase efficiency and equity in the research effort.

Global Innovation Index 2020 Cornell University 2020-08-13 The Global Innovation Index 2020 provides detailed metrics about the innovation performance of 131 countries and economies around the world. Its 80 indicators explore a broad vision of innovation, including political environment, education, infrastructure and business sophistication. The 2020 edition sheds light on the state of innovation financing by investigating the evolution of financing mechanisms for entrepreneurs and other innovators, and by pointing to progress and remaining challenges – including in the context of the economic slowdown induced by the coronavirus disease (COVID-19)

crisis.

Agricultural Development Y?jir? Hayami 1985 Introduction; Problems and theory; Agriculture in economic development theories; Theories of agricultural development; Toward a theory of technical and institutional change; International comparisons; International comparisons of agricultural productivity; Sources of agricultural productivity differences among countries; Agricultural growth in the United States and Japan; Resource constraints and technical change; Science and progress in agriculture; Can growth be transferred?; International transfer of agricultural technology; Technology transfer and land infrastructure; Retrospect and prospect; Growth and equity in agricultural development; Disequilibrium in world agriculture; Agricultural transformation and economic growth; Appendixes.

New Seeds and Poor People Michael Lipton 2010-11-29 First published in 1989, this book deals with the impact of cereal production upon the Third World, specifically 'Modern Varieties' (MVs). Using evidence from plant breeding, economics and nutrition science, the authors seek to pinpoint what has been achieved, what has gone wrong and what needs to be done in future. Although the technical innovations of MVs mean more employment, cheaper food and less risk for small farmers, the reduction in crop diversity increases the risk of danger from pests and though MVs enlarge cereal stocks, many are too poor to afford them. The book concludes that technical breakthroughs alone won't solve deep-rooted social problems and that only new policies and research priorities will increase the choices, assets and power of the rural poor.

Handbook of Agricultural Economics Bruce L. Gardner 2001-12-20

Agricultural Productivity and Producer Behavior Wolfram Schlenker 2019 "Agriculture plays a key role in economic growth and development. As recently as 1800, more than half the population in most European countries worked on farms and in fields, though this shifted with the industrial revolution. Agricultural efficiencies were not immediately apparent until the middle of the 20th century when yields began to increase and they have continued to grow at a steady pace since. At the same time, inflation-adjusted agricultural commodity prices have been trending downward as increases in supply outpaced increases in demand. Food is an essential good, and while its price is currently low due to its abundance, it is responsible for a large consumer surplus given the highly inelastic demand. Understanding the factors that contribute to the upward trend in yields is of first-order importance for food security and human welfare. This book contains eight chapters that examine the factors behind the remarkably steady increase in yields around the globe, in order to better understand whether this trend can continue into the future and whether it will impose significant environmental externalities. The volume provides fresh and original analyses using methodological innovations to analyze recently available micro-level data sets"--

Strategies for Agricultural Development Vernon W. Ruttan 1973

Technology, Growth, and Development Vernon W. Ruttan 2001 Technology, Growth, and Development uniquely presents the complexities of technical and institutional change on the foundation of modern growth theory. The author shows how the rates and directions of technical change are induced by changes in competitive funding and institutional innovations in the modern research university and industrial laboratory. In turn, technical change itself becomes a powerful source of institutional change. Organized by the author in four parts, the first-Productivity and Economic Growth-gives specific reasons for the slowing of productivity growth in the United States and other leading industrial countries during the last quarter of the twentieth century. In Part II-Sources of Technical Change-the author examines a host of economic factors that influence invention and innovation; the rate and direction of institutional change; and

the adoption, diffusion, and transfer of technology. In Part III-Technical Innovation and Industrial Change-he traces the sources and impact of technical change in five strategically important industries: agriculture, electric power, chemical, computer, and biotechnology. The final section, Part IV-Technology Policy-evaluates the role of technical change in international competition, the role of science and technology in environmental policy, and the evolution of U.S. science and technology policy. Technology, Growth, and Development makes few mathematical demands on students, and will be used in courses within economics departments as well as management and public affairs. In addition, it will be required reading for professional economists, managers, and policy analysts at all levels.

Agricultural Productivity Growth in the United States :. Sun Ling Wang 2015

Agricultural Innovation Systems The World Bank 2012-02-21 Managing the ability of agriculture to meet rising global demand and to respond to the changes and opportunities will require good policy, sustained investments, and innovation - not business as usual. Investments in public Research and Development, extension, education, and their links with one another have elicited high returns and pro-poor growth, but these investments alone will not elicit innovation at the pace or on the scale required by the intensifying and proliferating challenges confronting agriculture. Experience indicates that aside from a strong capacity in Research and Development, the ability to innovate is often related to collective action, coordination, the exchange of knowledge among diverse actors, the incentives and resources available to form partnerships and develop businesses, and conditions that make it possible for farmers or entrepreneurs to use the innovations. While consensus is developing about what is meant by 'innovation' and 'innovation system', no detailed blueprint exists for making agricultural innovation happen at a given time, in a given place, for a given result. The AIS approach that looks at these multiple conditions and relationships that promote innovation in agriculture, has however moved from a concept to a sub-discipline with principles of analysis and action. AIS investments must be specific to the context, responding to the stage of development in a particular country and agricultural sector, especially the AIS. This sourcebook contributes to identifying, designing, and implementing the investments, approaches, and complementary interventions that appear most likely to strengthen AIS and to promote agricultural innovation and equitable growth. It emphasizes the lessons learned, benefits and impacts, implementation issues, and prospects for replicating or expanding successful practices. The information in this sourcebook derives from approaches that have been tested at different scales in different contexts. It reflects the experiences and evolving understanding of numerous individuals and organizations concerned with agricultural innovation, including the World Bank. This information is targeted to the key operational staff in international and regional development agencies and national governments who design and implement lending projects and to the practitioners who design thematic programs and technical assistance packages. The sourcebook can also be an important resource for the research community and nongovernmental organizations (NGOs).

Farming Systems and Poverty John A. Dixon 2001 A joint FAO and World Bank study which shows how the farming systems approach can be used to identify priorities for the reduction of hunger and poverty in the main farming systems of the six major developing regions of the world.

Agricultural Transition in China Jun Du 2018-05-07 This book extends current research on the political economy of modern China, with particular regard to agricultural development and its role in economic transition. It uses Neoclassical principles to re-interpret agricultural growth and technological change under complex market institutions with empirical studies on China and selected East Asian economies.

The text also questions how technological advances in China contribute to the Great Divergence debate. Through a comparative analysis of agricultural technical changes in the planting of rice paddies in Japan, Taiwan and China, Du finds that different market institutions and structures have given rise to considerable diversity of agricultural change between different economies in terms of the nature, timing and duration of technological transition. Such diversification has, in turn, affected the trajectories of agricultural and wider economic growth. Here, Du reflects on the nature of contemporary Chinese economic development and extends observations on agricultural transition to the entirety of Asia, finding that the nature, timing, and time-span of agriculture technology transitions have varied considerably across different economies.

**Agricultural development: New perspectives in a changing world** Otsuka, Keijiro, ed. 2021-01-14 **Agricultural Development: New Perspectives in a Changing World** is the first comprehensive exploration of key emerging issues facing developing-country agriculture today, from rapid urbanization to rural transformation to climate change. In this four-part volume, top experts offer the latest research in the field of agricultural development. Using new lenses to examine today's biggest challenges, contributors address topics such as nutrition and health, gender and household decision-making, agrifood value chains, natural resource management, and political economy. The book also covers most developing regions, providing a critical global perspective at a time when many pressing challenges extend beyond national borders. Tying all this together, **Agricultural Development** explores policy options and strategies for developing sustainable agriculture and reducing food insecurity and malnutrition. The changing global landscape combined with new and better data, technologies, and understanding means that agriculture can and must contribute to a wider range of development outcomes than ever before, including reducing poverty, ensuring adequate nutrition, creating strong food value chains, improving environmental sustainability, and promoting gender equity and equality. **Agricultural Development: New Perspectives in a Changing World**, with its unprecedented breadth and scope, will be an indispensable resource for the next generation of policymakers, researchers, and students dedicated to improving agriculture for global wellbeing.

**Technological and Institutional Innovations for Marginalized Smallholders in Agricultural Development** Franz W. Gatzweiler 2016-02-19 The aim of the book is to present contributions in theory, policy and practice to the science and policy of sustainable intensification by means of technological and institutional innovations in agriculture. The research insights re from Sub-Saharan Africa and South Asia. The purpose of this book is to be a reference for students, scholars and practitioners in the field of science and policy for understanding and identifying agricultural productivity growth potentials in marginalized areas.

**The Spirit of Green** William D. Nordhaus 2021-05-18 From a Nobel Prize-winning pioneer in environmental economics, an innovative account of how and why "green thinking" could cure many of the world's most serious problems—from global warming to pandemics Solving the world's biggest problems—from climate catastrophe and pandemics to wildfires and corporate malfeasance—requires, more than anything else, coming up with new ways to manage the powerful interactions that surround us. For carbon emissions and other environmental damage, this means ensuring that those responsible pay their full costs rather than continuing to pass them along to others, including future generations. In **The Spirit of Green**, Nobel Prize-winning economist William Nordhaus describes a new way of green thinking that would help us overcome our biggest challenges without sacrificing economic prosperity, in large part by accounting for the spillover costs of economic collisions. In a discussion that ranges from the history of the environmental movement to the Green

New Deal, Nordhaus explains how the spirit of green thinking provides a compelling and hopeful new perspective on modern life. At the heart of green thinking is a recognition that the globalized world is shaped not by isolated individuals but rather by innumerable interactions inside and outside the economy. He shows how rethinking economic efficiency, sustainability, politics, profits, taxes, individual ethics, corporate social responsibility, finance, and more would improve the effectiveness and equity of our society. And he offers specific solutions—on how to price carbon, how to pursue low-carbon technologies, how to design an efficient tax system, and how to foster international cooperation through climate clubs. The result is a groundbreaking new vision of how we can have our environment and our economy too.

The Rice Economy of Asia Randolph Barker 2014-04-04 To millions of people in the world, rice is the center of existence, especially in Asia, where more than 90 percent of the world's rice is grown. This book is about the trends and changes that have occurred in the Asian rice economy since World War II, but particularly since the introduction of new varieties of rice and modern technology in the mid-1960s. Although there is now a vast amount of literature and statistical data on various aspects of the subject, no single comprehensive treatment has previously been prepared. The Rice Economy of Asia not only provides such a treatment but also presents a clear picture of some of the critical issues dealing with productivity and equity --- as a glance at the table of contents will show. In addition to 18 chapters, there are an extensive bibliography, 150 tables, and 50 charts. The volume, as a whole, should be interesting and useful to decisionmakers at national and international levels, to professionals, and to students of development.

Harvesting Prosperity Keith Fuglie 2019-11-05 Back cover blurb Rising agricultural productivity has driven improvements in living standards for millennia. Today, redoubling that effort in developing countries is critical to reducing extreme poverty, ensuring food security for an increasing global population, and adapting to changes in climate. This volume presents fresh analysis on global trends and sources of productivity growth in agriculture and offers new perspectives on the drivers of that growth. It argues that gains from the reallocation of land and labor are not as promising as believed, so policy needs to focus more on the generation and dissemination of new technologies, which requires stepping up national research efforts. Yet, in many of the poorest nations, a serious research spending gap has emerged precisely at the time when the challenges faced by agriculture are intensifying. The book focuses on how this problem can be redressed in the public sector, as well as on reforms aimed at mobilizing new private sector actors and value chains, particularly creating a better enabling environment, reforming trade regulations, introducing new products, and strengthening intellectual property rights. On the demand side, the book examines what recent research reveals about policies to reduce the barriers impeding smallholder farmers from adopting new technologies. Harvesting Prosperity is the fourth volume of the World Bank Productivity Project, which seeks to bring frontier thinking on the measurement and determinants of productivity to global policy makers. “As rightly argued by the authors, growth in agricultural productivity is the essential instrument to promote development in low-income agriculture-based countries. Achieving this requires research and development, upgrading of universities, reinforcement of farmer capacities, removal of constraints to adoption, and the development of inclusive value chains with interlinked contracts. As important, such efforts also need to be placed within a context of comprehensive agricultural, rural, and structural transformations. However, in many countries implementation of the requisite policies has been lagging. This book, with contributions from many top experts in the field, provides the most up-to-date presentation of this argument and explains in detail how to successfully put its ideas into practice. Governments, the private sector, and

civil society organizations need to study it carefully to turn the promise of agriculture for development into a reality.” Alain de Janvry and Elisabeth Sadoulet Professors of the Graduate School, University of California at Berkeley

Entrepreneurship and Innovation in Japanese Agriculture Akira Kiminami 2019-08-14 This is the first book to comprehensively analyze key issues regarding innovation, entrepreneurship, and human resource development in the Japanese agricultural sector. Despite the fact that innovation and entrepreneurship are vital to the development of modern Japanese agriculture, there have been comparatively few studies in this field; in addition, they have been virtually none on measures for developing entrepreneurial human resources or innovation in agriculture. The agricultural sector’s declining competitiveness and sustainability as an industry in Japan are serious concerns, especially in combination with an aging labor force and decreasing farmland. To date, Japanese agricultural policies have largely concentrated on accumulating farmland and securing a sufficient agricultural labor force. However, from the perspectives of industrial and regional development, policies focusing on creating innovation, the driving force of economic development, have been recognized as being more effective. Moreover, there have been some recent developments concerning innovation and entrepreneurship in various regions of Japan. This book provides a wealth of significant findings from studies on successful cases involving e.g. agricultural clusters, agriculture–commerce–industry collaborations, networking, franchising, and corporate entry-induced innovation utilizing limited regional resources; and how they have contributed to the development of each region. The interrelationships between innovation, entrepreneurship, and human resource development are then clarified, and effective policies to promote Japanese agriculture and rural areas are suggested. Given its scope, the book contributes to the advancement not only of farm management science, but also of regional science and related fields.

The Economics of Agricultural Development George W. Norton 2014-06-03 Persistent problems with poverty, rapid population growth and malnutrition in many developing countries are among the most serious issues facing the world today. This book examines the causes, severity and effects of these problems, as well as potential solutions. The authors consider the implications of globalization of goods, services and capital for agriculture, poverty and the environment; and identify linkages in the world food system, stressing how agricultural and economic situations in poor countries affect industrialized nations and vice versa. Focusing on the role that agriculture can play in improving economic and nutritional wellbeing and how that role might be enhanced, this book is essential reading.

Technical Change and Social Conflict in Agriculture Martin E Pineiro 2021-02-19 Incorporating case studies of technological change in six Latin American countries, this book presents the results of a large cooperative research project (PROTAAL) that has led to a new interpretation of the process of technical change in agricultural development. The contributors contrast the perspective emerging from PROTAAL with two other views of technical change in agriculture: the theory of induced innovation and the political economy approach. They then describe the methodology developed by PROTAAL, which is highlighted in their analysis of the case studies. In the concluding chapters, the authors address important issues concerning the organization of agricultural research activities at the national and international levels and consider theoretical and policy implications for the analysis of technical change in Latin American agriculture.

International Agricultural Development Carl K. Eicher 1998-11-20 Other topics include market failures, food insecurity, rural poverty, environmental degradation, income and asset inequality, fiscally sustainable organizations, the changing roles of the public and private

sector in research, input delivery systems, marketing and low rates of agricultural growth in much of sub-Saharan Africa.

Economics of Agricultural Development George W. Norton 2014-09-25 Economics of Agricultural Development examines the causes, severity, and effects of poverty, population growth, and malnutrition in developing countries. It discusses potential solutions to these problems, progress made in many countries in recent years, and the implications of globalization for agriculture, poverty, and the environment. Topics covered in the book include:

- Means for utilizing agricultural surpluses to further overall economic development
- The sustainability of the natural resource environment
- Gender issues in relation to agriculture and resource use
- The contribution of agricultural technologies
- The importance of agricultural and macroeconomic policies as related to development and trade, and the successes and failures of such policies
- Actions to encourage more rapid agricultural and economic development

The globalization of trade in goods, services, and capital has been fundamental to changes being experienced in the agricultural and rural sectors of developing countries. It has major implications for the fight against poverty and food insecurity and for environmental sustainability.

Recently, agriculture has returned to a position of center stage in the development dialog as food price volatility has increased along with water scarcity, and concerns grow over the effects of climate change on food supply and food security. This new edition of the essential textbook in the field builds on the 2010 edition and reflects the following developments:

- Growth in foreign demand for land and other natural resources
- Significant progress in agricultural and economic development in some low-income countries while others are being left behind
- Continued growth in demand for higher-valued farm products

This book is essential reading for undergraduate students seeking to understand the economics of agricultural development and the world food system, including environmental and human consequences, international trade, and capital flows.

Induced Innovation Theory and International Agricultural Development Bruce Koppel 1995

The impact of disasters and crises on agriculture and food security: 2021 Food and Agriculture Organization of the United Nations 2021-03-17 On top of a decade of exacerbated disaster loss, exceptional global heat, retreating ice and rising sea levels, humanity and our food security face a range of new and unprecedented hazards, such as megafires, extreme weather events, desert locust swarms of magnitudes previously unseen, and the COVID-19 pandemic. Agriculture underpins the livelihoods of over 2.5 billion people – most of them in low-income developing countries – and remains a key driver of development. At no other point in history has agriculture been faced with such an array of familiar and unfamiliar risks, interacting in a hyperconnected world and a precipitously changing landscape. And agriculture continues to absorb a disproportionate share of the damage and loss wrought by disasters. Their growing frequency and intensity, along with the systemic nature of risk, are upending people's lives, devastating livelihoods, and jeopardizing our entire food system. This report makes a powerful case for investing in resilience and disaster risk reduction – especially data gathering and analysis for evidence informed action – to ensure agriculture's crucial role in achieving the future we want.

Climate Smart Agriculture Leslie Lipper 2017-10-20 This book is open access under a CC BY-NC-SA 3.0 IGO license. The book uses an economic lens to identify the main features of climate-smart agriculture (CSA), its likely impact, and the challenges associated with its implementation. Drawing upon theory and concepts from agricultural development, institutional, and resource economics, this book expands and formalizes the conceptual foundations of CSA. Focusing on the adaptation/resilience dimension of CSA, the text embraces a mixture of conceptual analyses, including theory, empirical and policy analysis, and case studies, to look at adaptation and resilience

through three possible avenues: ex-ante reduction of vulnerability, increasing adaptive capacity, and ex-post risk coping. The book is divided into three sections. The first section provides conceptual framing, giving an overview of the CSA concept and grounding it in core economic principles. The second section is devoted to a set of case studies illustrating the economic basis of CSA in terms of reducing vulnerability, increasing adaptive capacity and ex-post risk coping. The final section addresses policy issues related to climate change. Providing information on this new and important field in an approachable way, this book helps make sense of CSA and fills intellectual and policy gaps by defining the concept and placing it within an economic decision-making framework. This book will be of interest to agricultural, environmental, and natural resource economists, development economists, and scholars of development studies, climate change, and agriculture. It will also appeal to policy-makers, development practitioners, and members of governmental and non-governmental organizations interested in agriculture, food security and climate change.

World Development Report 2008 World Bank 2007-10-15 The world's demand for food is expected to double within the next 50 years, while the natural resources that sustain agriculture will become increasingly scarce, degraded, and vulnerable to the effects of climate change. In many poor countries, agriculture accounts for at least 40 percent of GDP and 80 percent of employment. At the same time, about 70 percent of the world's poor live in rural areas and most depend on agriculture for their livelihoods. 'World Development Report 2008' seeks to assess where, when, and how agriculture can be an effective instrument for economic development, especially development that favors the poor. It examines several broad questions: How has agriculture changed in developing countries in the past 20 years? What are the important new challenges and opportunities for agriculture? Which new sources of agricultural growth can be captured cost effectively in particular in poor countries with large agricultural sectors as in Africa? How can agricultural growth be made more effective for poverty reduction? How can governments facilitate the transition of large populations out of agriculture, without simply transferring the burden of rural poverty to urban areas? How can the natural resource endowment for agriculture be protected? How can agriculture's negative environmental effects be contained? This year's report marks the 30th year the World Bank has been publishing the 'World Development Report'.

Economic Models of Tropical Deforestation: A Review David Kaimowitz 1998-01-01 Types of economic deforestation models.

Household and firm-level models. Regional-level models. National and macro-level models. Priority areas for future research.

Agriculture and Industry in Brazil Albert Fishlow 2020-08-04 Agriculture and Industry in Brazil is a study of the economics of Brazilian agriculture and industry, with a special focus on the importance of innovation to productivity growth. Albert Fishlow and José Eustáquio Ribeiro Vieira Filho examine technological change in Brazil, highlighting the role of public policy in building institutions and creating an innovation-oriented environment. Fishlow and Vieira Filho tackle the theme of innovation from various angles. They contrast the relationship between state involvement and the private sector in key parts of the Brazilian economy and compare agricultural expansion with growth in the oil and aviation sectors. Fishlow and Vieira Filho argue that modern agriculture is a knowledge-intensive industry and its success in Brazil stems from public institution building. They demonstrate how research has played a key role in productivity growth, showing how prudent innovation policies can leverage knowledge not only within a particular company but also across whole sectors of the economy. The book discusses whether and how Brazil can serve as a model for other middle-income countries eager to achieve higher growth and a more egalitarian distribution of income. An important contribution to comparative, international, and development

economics, Agriculture and Industry in Brazil shows how the public success in agriculture became a prototype for advance elsewhere. On the Economic Theory of Socialism Oskar Lange 1938 On the Economic Theory of Socialism was first published in 1938. Minnesota Archive Editions uses digital technology to make long-unavailable books once again accessible, and are published unaltered from the original University of Minnesota Press editions. Is socialism workable on economic grounds? "No," say the chief European critics of socialism – von Mises, Robbins, and von Hayek. "Yes," say Lange and Taylor in these two papers – the first refutation in English of the objections of these economists. There has been consistent demand for this book since it went out of print in 1944. This reprint is in response to that demand.

Generation and Diffusion of Agricultural Technology Stephen D. Biggs 1983

Communication for Rural Innovation Cees Leeuwis 2013-04-30 This important book is the re-titled third edition of the extremely well received and widely used Agricultural Extension (van den Ban & Hawkins, 1988, 1996). Building on the previous editions, Communication for Rural Innovation maintains and adapts the insights and conceptual models of value today, while reflecting many new ideas, angles and modes of thinking concerning how agricultural extension is taught and carried through today. Since the previous edition of the book, the number and type of organisations that apply communicative strategies to foster change and development in agriculture and resource management has become much more varied and this book is aimed at those who use communication to facilitate change in agriculture and resource management. Communication for Rural Innovation is essential reading for process facilitators, communication division personnel, knowledge managers, training officers, consultants, policy makers, extension specialists and managers of agricultural extension or research organisations. The book can also be used as an advanced introduction into issues of communicative intervention at BSc or MSc level.

Can Economic Growth Be Sustained? Vernon W. Ruttan 2011-10-18 Nothing could be more valuable than creating a new paradigm in economics, particularly in the field of agricultural development. A notable example is T. W. Schultz's (1964) thesis regarding "efficient but poor" small-scale farmers in low-income or developing countries. No less influential is Vernon Ruttan and Yujiro Hayami's thesis concerning the role of induced technical and institutional innovation; arguing that as the scarcity of a factor of production (e.g. labor) increases, technology that saves on the use of the factor is induced to develop, along with supportive institutions, including property rights systems, public-sector research and extension systems, and marketing institutions. In Chapter 2 of this volume, they note that "it became clear that the induced technical change theme could provide the structure needed to integrate a large body of theoretical and empirical research on agricultural development." In fact, their research provided a consistent and effective framework to analyze how markets, technology development and institutional changes interact to facilitate agricultural development. Their perspectives are wide, covering large geographical areas and a thorough analysis of the historical development of agriculture in the United States, Japan, and many other Asian countries. The book collects the most influential papers of Ruttan and Hayami in order to aid readers in understanding how these highly influential agricultural economists developed their perspectives.

Induced Innovation Hans P. Binswanger-Mkhize 1978 Induced technical change and development; The theory of induced technical change; Some cases and tests; Induced institutional change.; Induced innovation and the Green Revolution.

Induced Technical and Institutional Change Evaluation and Reassessment

Y?jir? Hayami 1993

The State of the World's Land and Water Resources for Food and Agriculture Food and Agriculture Organization of the United Nations  
2013-06-17 The State of the World's Land and Water Resources for Food and Agriculture is FAO's first flagship publication on the global status of land and water resources. It is an 'advocacy' report, to be published every three to five years, and targeted at senior level decision makers in agriculture as well as in other sectors. SOLAW is aimed at sensitizing its target audience on the status of land resources at global and regional levels and FAO's viewpoint on appropriate recommendations for policy formulation. SOLAW focuses on these key dimensions of analysis: (i) quantity, quality of land and water resources, (ii) the rate of use and sustainable management of these resources in the context of relevant socio-economic driving factors and concerns, including food security and poverty, and climate change. This is the first time that a global, baseline status report on land and water resources has been made. It is based on several global spatial databases (e.g. land suitability for agriculture, land use and management, land and water degradation and depletion) for which FAO is the world-recognized data source. Topical and emerging issues on land and water are dealt with in an integrated rather than sectoral manner. The implications of the status and trends are used to advocate remedial interventions which are tailored to major farming systems within different geographic regions.
