Shot Over Into the Shotover Richard J. Waugh 2018 "In New Zealand de Havilland DH89 Rapides/Dominies have been continuously flying longer than any other aircraft type - for over 80 years - and with no fatalities. But experienced pilot Brian Waugh's Dominie was forced down by engine failure into Queenstown's Shotover River. This book tells the absorbing story of this unusual accident. The subsequent intrigue involved engine reliability issues, an inadequate accident investigation, and how Waugh, a licensed aircraft engineer, while recovering from his injuries, happened by chance to inspect one of the engines being dismantled for overhaul. What he discovered led him to relentlessly advocate for a proper investigation ..."--Publisher's description.

The Internal-combustion Engine in Theory and Practice Charles Fayette Taylor 1985 This revised edition of Taylor's classic work on the internal-combustion engine incorporates changes and additions in engine design and control that have been brought on by the world petroleum crisis, the subsequent emphasis on fuel economy, and the legal restraints on air pollution. The fundamentals and the topical organization, however, remain the same. The analytic rather than merely descriptive treatment of actual engine cycles, the exhaustive studies of air capacity, heat flow, friction, and the effects of cylinder size, and the emphasis on application have been preserved. These are the basic qualities that have made Taylor's work indispensable to more than one generation of engineers and designers of internal-combustion engines, as well as to teachers and graduate students in the fields of power, internal-combustion engineering, and general machine design. Charles Fayette Taylor is Professor of Automotive Engineering Emeritus at MIT. He directed the Sloan Automotive Laboratories at MIT from 1926 to 1960

Mike Busch on Engines Mike Busch 2018-05-12 "The risk of engine failure is greatest when your engine is young, NOT when it's old. You should worry more about pediatrics than geriatrics." -Mike Busch A&P/IA Mike Busch on Engines expands the iconoclastic philosophy of his groundbreaking first book Manifesto to the design, operation, condition monitoring, maintenance and troubleshooting of piston aircraft engines. Busch begins with the history and theory of four-stroke spark-ignition engines. He describes the construction of both the "top end" (cylinders) and "bottom end" (inside the case), and functioning of key systems (lubrication, ignition, carburetion, fuel injection, turbocharging). He reviews modern engine leaning technique (which your POH probably has all wrong), and provides a detailed blueprint for maximizing the life of your engine. The second half presents a 21st-century approach to health assessment, maintenance, overhaul and troubleshooting. Busch explains how modern condition monitoring tools-like borescopy, oil analysis and digital engine monitor data analysis-allow you to extend engine life and overhaul strictly on-condition rather at an arbitrary TBO. The section devoted to troubleshooting problems like rough running, high oil consumption, temperamental ignition and turbocharging issues is worth its weight in gold. If you want your engine to live long and

prosper, you need this book.
