Microeconomics John P. Burkett 2006-04-20 In this book, John P. Burkett presents microeconomics as an evolving science, interacting with mathematics, psychology, and other disciplines and offering solutions to a growing range of practical problems. The book shows how early contributors such as Xenophon, Ibn Khaldun, and David Hume posed the normative and positive questions central to microeconomics. It expounds constrained optimization techniques, as developed by economists and mathematicians from Daniel Bernoulli to Leonid Kantorovich, emphasizing their value in deriving norms of rational behavior and testable hypotheses about typical behavior. Applying these techniques, the book

introduces partial equilibrium analysis of particular markets and general equilibrium analysis of market economies. The book both explains how laboratory and field experiments are used in testing economic hypotheses and provides materials for classroom experiments. It gives extensive and innovative coverage of recent findings in cognitive psychology and behavioral economics, which not only document behavior inconsistent with some traditional theories, but also advance positive theories with superior predictive power.

Managerial Economics and Organizational Architecture James A. Brickley 1997 With two distinct objectives, this text's approach to managerial economics takes models from recent economics research and applies the research to the internal structure of a firm. After teaching basic applied economics, the authors look inside the firm and apply this analysis to management decision making. Authors Brickley, Smith, and Zimmerman contend that organizational architecture consists of three aspects of corporate organization: the assignment of decision rights within the company; methods of rewarding individuals; the structure of systems to evaluate the performance of both individuals and business units. These three components can be likened to a stool with three legs. If one of the legs is shorter, the stool is out of balance. These three elements must be in balance in the organization as well.

Managerial Discretion and Performance in China Hagen Wülferth 2013-04-17 ?The theoretical and

empirical literature to date has fallen short of reaching a consensus as to whether granting more managerial discretion to managers tends to enhance, not alter or diminish organizational performance (the discretion puzzle). This book aims to build a bridge between these contradictory results by synthesising principal-agent theory, stewardship theory, and managerial discretion theory into a new empirically-validated model. Using a representative sample of 'double-blind' interviews with managers of 467 firms in China and applying partial least squares path modelling (PLS), the study identifies a potential cause of the discretion puzzle: the failure of the extant literature to account for granularity in the way that managers use their discretion. This generates far-reaching implications for theoretical and empirical research as well as practical recommendations for managing managers in multinationals and Chinese companies.

Despite its immense importance to audit practice and the voluminous literature on this issue, professional skepticism is a topic which still involves more questions than answers. The work provides important theoretical and empirical insights into the behavioral implications of professional skepticism in auditing.

Managerial Economics Donald N. Stengel 2011-06-30 Economic principles inform good business decision making. Although economics is sometimes dismissed as a discourse of practical relevance to only a relatively small circle of academicians and policy analysts who call themselves economists, sound economic reasoning benefits any manager of a business, whether they are involved with production/operations, marketing, finance, or corporate strategy. Along with enhancing decision making, the field of economics provides a common language and framework for comprehending and communicating phenomena that occur within a business, as well as between a business and its environment. This text addresses the core of a subject commonly called managerial economics, which is the application of microeconomics to business decisions. Key relationships between price, quantity, cost, revenue, and profit for an individual firm are presented in form of simple conceptual models. The text includes key elements from the economics of consumer demand and the economics of production. The book discusses economic motivations for expanding a business and contributions from economics for improved organization of large firms. Market price quantity equilibrium, competitive behavior, and the role of market structure on market equilibrium and competition are addressed. Finally, the text considers market regulation in terms of the generic problems that create the need for regulation and possible remedies for those problems. Although the academic literature of managerial economics often employs abstract mathematics and large corporations create and use sophisticated mathematical models that apply economics, this book focuses on concepts, terminology, and principles, with minimal use of mathematics. The reader will gain a better understanding of why businesses and markets function as they do and how those institutions can function better.

**Business and Non-profit Organizations Facing Increased Competition and Growing Customers' Demands**

Anna Ujwary-Gil 2017 From the perspective of commercial and non-commercial organizations, this monograph with contemporary organizational and management problems, focus on four thematic areas. Traditionally, the first one is concentrating the reader's attention on the internal aspects of the organization's functioning as an object of research. In this regard, articles related to the concept of corporate social responsibility in two ways: organizational research and bibliometric analysis. The authors used an analogical (bibliometric) approach to examine trends in publishing for the concept of learning organizations. In this part of the discussion, the social aspect has been strongly displayed, also thanks to the social capital and enterprise. Another topic in this section is the role of the workers' knowledge in creating innovative solutions, emphasizing the role of trust and culture-rich collaboration between employees, employees' participation in creating projects, and organizational change. In addition, it discusses the role of information and knowledge networks and sharing knowledge among employees, which does remain without influence on the shaping of individual employees' careers. Slightly different from the other articles, though set in this section, there is an article referring to the organizational pathology. These considerations are much more valuable, usually because of the difficult access to negative information. The next section presents articles in the context of the modern tools used in the management of commercial and non-commercial organizations. This part of the discussion starts an article about forecasting methods and modern models of business management. In opposition to these considerations, the problem of unused, modern management methods in the local government sector,

remains valid. Also, it refers to social media as a source of customer knowledge and management control, which should be considered as a strong and innovative determinant influencing the development of contemporary management methods of a modern enterprise. Interesting considerations are included in the article on the process management, with emphasis on the dynamic management of business processes and IT systems that go with it. The other articles present the concepts of the risk management model in a technology project, business model used in franchising, and the concept of accountability in conjunction with the development of innovation thanks to negotiating the role of intellectual capital. The modern market economy forces organizations to develop their ability to adapt to the conditions by improving their organization continually. It shows how modern-day commercial and non-commercial organizations are competing in a competitive market. This section opens the article, referring to the social competences of students developed during their studies and the competences of the future, which were studied and compared in two universities. The integral part of the organization's functioning of the organization in the environment is their broadly understood cooperation for the implementation of the objectives and achieving a competitive advantage in the market. This trend covers articles referring to the participation of county in networking, modeling synergistic interrelations within the business association, or the conditions that should be met between enterprises and institutions supporting the technological development of the organization. Other considerations concern customer preferences concerning their choice of commercial banks, the factors that determine the choice of financial instruments by small and medium enterprises, or the demands of sustainable family business development. The final part of the articles is related to a broader perspective, and so the functioning of the organization from a sectoral perspective and across industries. A distinctive feature is a sectoral approach to knowledge-based business services, the determinants of knowledge-based products in the pharmaceutical industry, and the behavior of competing companies in the chocolate and confectionery industry. A separate topic in this section is the concept of capturing value or the value in a sectoral approach. The issues related to the

protection of personal data in the healthcare sector, patent activity of enterprises in the technology park, as well as the management of resources in the cluster. The prepared monograph is an interdisciplinary compendium of knowledge on the functioning of both commercial and non-commercial organizations in the context of three perspectives: micro, meso, and macro. The advantage of this type of studies is modern and up-to-date look at the problems of management, organization behavior, or the functioning of the organizations in the sector.
